د. عبدالله عبدالأمير حسين

## الموائع (Fluids)

- Three (common) phases of matter:

1. Solid: Maintains shape \& size (approx.), even under large forces.
2. Liquid: No fixed shape. Takes shape of container.
3. Gas: Neither fixed shape, nor fixed volume. Expands to fill container.
Lump 2. \& 3. into category of FLUIDS. Fluids: Have the ability to flow.
المانع لايه الققرة على الانسياب.

## Density \& Specific Gravity

الكثافة

- Density, $\boldsymbol{\rho}$ (lower case Greek rho, NOTp!) of object, mass $\mathbf{M} \&$ volume $\mathbf{V}$ :

كثافة المادة نسبة الى كثافة الماء

$$
\rho \equiv(\mathbf{M} / \mathrm{V}) \quad\left(\mathrm{kg} / \mathrm{m}^{3}=10^{-3} \mathrm{~g} / \mathrm{cm}^{3}\right)
$$

- Specific Gravity (SG): Ratio of density of a substance to density of water.

$$
\rho_{\text {water }}=1 \mathrm{~g} / \mathrm{cm}^{3}=1000 \mathrm{~kg} / \mathrm{m}^{3}
$$

See table!!

$$
\begin{aligned}
& \rho=(\mathrm{M} / \mathrm{V}) \quad \mathrm{SG}=\left(\rho / \rho_{\text {water }}\right)=10^{-3} \rho \\
& \left(\rho_{\text {water }}=10^{3} \mathrm{~kg} / \mathrm{m}^{3}\right)
\end{aligned}
$$

## Table 10-1 <br> Densities of Substances ${ }^{\dagger}$

| Substance | Density, <br> $\boldsymbol{\rho}\left(\mathbf{k g} / \mathbf{m}^{\mathbf{3}}\right)$ |
| :--- | ---: |
| Solids |  |
| Aluminum | $2.70 \times 10^{3}$ |
| Iron and Steel | $7.8 \times 10^{3}$ |
| Copper | $8.9 \times 10^{3}$ |
| Lead | $11.3 \times 10^{3}$ |
| Gold | $19.3 \times 10^{3}$ |
| Concrete | $2.3 \times 10^{3}$ |
| Granite | $2.7 \times 10^{3}$ |
| Wood (typical) | $0.3-0.9 \times 10^{3}$ |
| Glass, common | $2.4-2.8 \times 10^{3}$ |
| Ice | $0.917 \times 10^{3}$ |
| Bone | $1.7-2.0 \times 10^{3}$ |

| Substance | Density, <br> $\rho\left(\mathbf{k g} / \mathrm{m}^{3}\right)$ |
| :--- | :---: |
| Liquids |  |
| Water $\left(4^{\circ} \mathrm{C}\right)$ |  |
| Blood, plasma | $1.00 \times 10^{3}$ |
| Blood, whole | $1.03 \times 10^{3}$ |
| Sea water | $1.025 \times 10^{3}$ |
| Mercury | $13.6 \times 10^{3}$ |
| Alcohol, ethyl | $0.79 \times 10^{3}$ |
| Gasoline | $0.68 \times 10^{3}$ |
| Gases |  |
| Air | 1.29 |
| Helium | 0.179 |
| Carbon dioxide | 1.98 |
| Water $($ steam $)$ | 0.598 |
| $\quad$ (i00 $\left.{ }^{\circ} \mathrm{C}\right)$ |  |
| Densities are given at $0^{\circ} \mathrm{C}$ and 1 atm pres- |  |
| sure unless otherwise specified. |  |

- Note: $\rho=(\mathbf{M} / \mathrm{V})$
$\Rightarrow \quad$ Mass of body, density $\rho$, volume $\mathbf{V}$ is

$$
\mathbf{M}=\rho \mathbf{V}
$$

$\Rightarrow$ Weight of body, density $\rho$, volume $\mathbf{V}$ is

$$
\mathbf{M g}=\rho \mathbf{V} \mathbf{g}
$$

## Pressure in Fluids

- Definition: Pressure = Force/Area

$$
\mathbf{P} \equiv(\mathbf{F} / \mathbf{A})
$$

F applied perpendicular to $\mathbf{A}$
SI units: $\mathbf{N} / \mathbf{m}^{2}$
$1 \mathrm{~N} / \mathrm{m}^{2}=1 \mathrm{~Pa}$ (Pascal)

P 15
$\therefore$ ANY
surface

FIGURE 10-1 Pressure is the same in every direction in a fluid at a given depth; if it weren't, the fluid would be in motion.

FLUID AT REST
EXPERIMENTAL FACT: FLUID AT
REST EXERTS A PRESSURE IN ALL DIRECTIONS.

- $\mathbf{P}$ is $\perp$ any fluid surface: $\mathbf{P}=\left(\mathbf{F}_{\perp} / \mathbf{A}\right)$ FIGURE 10-2 If there were a component of force parallel to the solid surface, the liquid would move in response to it; for a liquid at rest, $F_{\|}=0$.

- Experimental Fact: Pressure depends on depth. Consider a fluid at rest. Depth $h$ below surface: FIGURE 10-3 Calculating the At rest $\Rightarrow \sum \mathbf{F}_{\mathbf{y}}=\mathbf{0}$ pressure at a depth $h$ in a liquid.

$$
\begin{aligned}
& \text { or, } \mathbf{F}-\mathbf{m g}=\mathbf{0} \Rightarrow \mathbf{F}=\mathbf{m g} \\
& \mathbf{F}=\mathbf{m g}=\rho \mathbf{V}, \mathbf{V}=\mathbf{A h} \\
& \Rightarrow \mathbf{F}=\rho A h g \\
& \Rightarrow \mathbf{P} \equiv \mathbf{F} / \mathbf{A}=\rho \mathrm{gh}
\end{aligned}
$$

Pressure at depth $\mathbf{h}$ (fluid at rest)
$\mathbf{P}=\rho \mathrm{gh}$

- Depth $\mathbf{h}$ below surface of liquid: $\mathbf{P}=\boldsymbol{\rho g h}$ $\Rightarrow$ Change in pressure with change in
 $\Delta \mathbf{P}=\rho \mathbf{g} \Delta \mathbf{h}$ (for a fluid at rest only!)

## Example

## Atmospheric Pressure

- Earth's atmosphere: A fluid.
- But doesn't have a fixed top "surface"!
- Change in height $\Delta \mathbf{h}$ above Earth's surface:
$\Rightarrow$ Change in pressure: $\Delta \mathbf{P}=\rho \mathbf{g} \Delta \mathbf{h}$
- Sea level: $\mathbf{P}_{\mathrm{A}} \equiv \mathbf{1 . 0 1 3} \times \mathbf{1 0}^{\mathbf{5}} \mathrm{N} / \mathbf{m}^{2}$ $=101.3 \mathrm{kPa} \equiv 1 \mathrm{~atm}$
- Old units: $\mathbf{1} \mathrm{bar}=1.00 \times \mathbf{1 0}^{5} \mathrm{~N} / \mathrm{m}^{2}$
- Physics: Cause of pressure at any height: Weight of air above that height!

## Gauge Pressure

- Pressure gauges (like tire gauges, etc.) measure difference between atmospheric pressure $\mathbf{P}_{\mathbf{A}}$ \& internal pressure (of tire, for example).
- Gauge pressure: $\mathbf{P}_{\mathrm{G}}=\mathbf{P}-\mathbf{P}_{\mathrm{A}}$

## Conceptual Example

$$
\mathbf{P}=\text { ? }
$$

Pressure on $\mathbf{A}$ :

$$
\mathbf{P}_{\text {down }}=\mathbf{P}+\mathbf{P}_{\mathrm{mg}}
$$

$$
\mathbf{P}_{\mathrm{up}}=\mathbf{P}_{\mathrm{A}}
$$

$$
\text { At rest } \Rightarrow \sum \mathbf{F}_{\mathbf{y}}=\mathbf{0}
$$

$\Rightarrow \mathbf{P}_{\text {up }}=\mathbf{P}_{\text {down }}$ or $\mathbf{P}_{\mathrm{A}}=\mathbf{P}+\mathbf{P}_{\mathrm{mg}}$
$\Rightarrow \mathbf{P}=\mathbf{P}_{\mathrm{A}}-\mathbf{P}_{\mathrm{mg}}<\mathbf{P}_{\mathrm{A}}$ So, air pressure holds fluid in straw!

## Section 10-5: Pascal's Principle

- Experimental fact:

An external pressure $\mathbf{P}$ applied to confined fluid increases the pressure throughout by $\mathbf{P}$

$$
\equiv \text { Pascal's Principle }
$$

- Simple example: Water in a lake (at rest). At depth $h$ below surface, pressure is $\mathbf{P}=\mathbf{P}_{\mathrm{A}}+\boldsymbol{\rho g h} \quad\left(\mathbf{P}_{\mathrm{A}}=\right.$ atmospheric pressure $)$

## Pascal's Principle

## Section 10-6: Pressure Measurement

- Many types of pressure measurement devices. Most use $\mathbf{P}-\mathbf{P}_{\mathrm{A}}=\boldsymbol{\rho g h}=\mathbf{P}_{\mathbf{G}}=$ gauge pressure

FIGURE 10-7 Pressure gauges: (a) open-tube manometer, (b) aneroid gauge, and (c) common tire pressure gauge.

(b) Aneroid gauge (used mainly for air pressure and then called an aneroid barometer)

(c) Tire gauge

## Various Pressure Units

- Gauge Pressure: $\mathbf{P}_{\mathrm{A}}=\boldsymbol{\rho g h}$
$\Rightarrow$ Alternate unit of pressure: Instead of calculating $\rho \mathrm{gh}$, common to use standard liquid (mercury, Hg or alcohol, where $\boldsymbol{\rho}$ is standard) \& measure $\mathbf{h}$
$\Rightarrow$ Quote pressure in length units! For example:
"millimeters of mercury" $\equiv \mathbf{m m ~ H g}$
For $h=1 \mathbf{~ m m ~ H g}=10^{-3} \mathbf{~ m ~ H g}$
$\rho_{\text {mercury }} \mathrm{gh}=\left(1.36 \times 10^{4} \mathrm{~kg} / \mathrm{m}^{3}\right)\left(9.8 \mathrm{~m} / \mathrm{s}^{2}\right)\left(10^{-3} \mathrm{~m}\right)$
$=133 \mathrm{~N} / \mathrm{m}^{2}=133 \mathrm{~Pa} \equiv 1$ Torr
(another pressure unit!)
$\mathbf{m m} \mathbf{H g} \& \mathbf{T o r r}$ are not proper SI pressure units!
- About as many pressure units as there are measurement devices!!

## TABLE 10-2

Conversion Factors Between Different Units of Pressure

| In Terms of $\mathbf{1 ~ P a}=\mathbf{1 N} / \mathrm{m}^{2}$ |  | Related to $\mathbf{1} \mathrm{atm}$ |  |
| ---: | :--- | ---: | :--- |
| 1 atm | $=1.013 \times 10^{5} \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=1.013 \times 10^{5} \mathrm{~N} / \mathrm{m}^{2}$ |
|  | $=1.013 \times 10^{5} \mathrm{~Pa}=101.3 \mathrm{kPa}$ |  |  |
| 1 bar | $=1.000 \times 10^{5} \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=1.013 \mathrm{bar}$ |
| $1 \mathrm{dyne} / \mathrm{cm}^{2}$ | $=0.1 \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=1.013 \times 10^{6} \mathrm{dyne} / \mathrm{cm}^{2}$ |
| $1 \mathrm{lb} / \mathrm{mn}^{2}$ | $=6.90 \times 10^{3} \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=14.7 \mathrm{lb} / \mathrm{in}^{2}$ |
| $1 \mathrm{lb} / \mathrm{ft}^{2}$ | $=47.9 \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=2.12 \times 10^{3} \mathrm{lb} / \mathrm{ft}^{2}$ |
| $1 \mathrm{~cm}-\mathrm{Hg}$ | $=1.33 \times 10^{3} \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=76 \mathrm{~cm}-\mathrm{Hg}$ |
| $1 \mathrm{~mm}-\mathrm{Hg}$ | $=133 \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=760 \mathrm{~mm}-\mathrm{Hg}$ |
| 1 torr | $=133 \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=760 \mathrm{torr}$ |
| $1 \mathrm{~mm}-\mathrm{H}_{2} \mathrm{O}\left(4^{\circ} \mathrm{C}\right)$ | $=9.81 \mathrm{~N} / \mathrm{m}^{2}$ | 1 atm | $=1.03 \times 10^{4} \mathrm{~mm}-\mathrm{H}_{2} \mathrm{O}\left(4^{\circ} \mathrm{C}\right)$ |

- Preferred (SI) unit: $1 \mathbf{P a}($ Pascal $)=1 \mathbf{N} / \mathbf{m}^{2}$

## Mercury Barometer

- Weather reports: Barometric pressure (atmospheric pressure): 28-32 inches $\mathbf{H g}$
$76 \mathrm{~cm}=760 \mathrm{~mm}$
$=29.29$ inches
When $\mathbf{h}=760 \mathrm{~mm}$,
$\mathbf{P}=\rho_{\text {mercury }} \mathbf{g h}=$ $1.013 \times 10^{5} \mathrm{~N} / \mathrm{m}^{2}$
$=1 \mathrm{~atm}$
- If use water
$\mathrm{P}=1 \mathrm{~atm}=\rho_{\text {water }} \mathrm{gh}$
$\Rightarrow \mathrm{h} \approx 10 \mathrm{~m} \approx 30$ feet!

FIGURE 10-8 Diagram of mercury barometer, when the ail pressure is $76 \mathrm{~cm}-\mathrm{Hg}$.

## Prob. 17: (A variation on Example)

Tank depth $=\mathbf{5} \mathbf{~ m}$ Pipe length $=\mathbf{1 1 0} \mathbf{~ m}$ Hill slope $=\mathbf{5 8}^{\circ}$

Gauge Pressure $\mathbf{P}_{\mathbf{G}}=$ ?
Height water $\mathbf{H}$ shoots from broken pipe at bottom?

$$
\text { FIGURE } 10-47 \text { Problem } 17 .
$$

Height of water level in
tank from house level: $\mathbf{h}=\left(\mathbf{5}+\mathbf{1 1 0} \sin 58^{\circ}\right)=\mathbf{9 8 . 3} \mathbf{~ m}$
$P_{G}=\rho_{\text {water }} \mathrm{gh}=\left(1 \times 10^{3} \mathrm{~kg} / \mathrm{m}^{3}\right)\left(9.8 \mathrm{~m} / \mathrm{s}^{2}\right)(\mathbf{9 8 . 3 ~ m})=9.6 \times 10^{5} \mathrm{~N} / \mathrm{m}^{2}$
Conservation of energy: $\mathbf{H}=\mathbf{h}=\mathbf{9 8 . 3} \mathbf{~ m}$
(Neglects frictional effects, etc.)
